

5 Reasons Why You Should Invest In Bitcoin

- **You can truly own Bitcoin.**

Bitcoin 'lives' on the internet. It's not a company, and it doesn't have a CEO. Similar to physical gold, you don't need to trust anyone when you hold bitcoin. Instead, it's true financial freedom and digital ownership.

- **Bitcoin is not 'crypto'.**

The first and only true cryptocurrency has the longest track record and the strongest security and showed remarkable resilience in its first decade. It's fundamentally different from any other cryptocurrencies.

- **Bitcoin is digital gold - but better.**

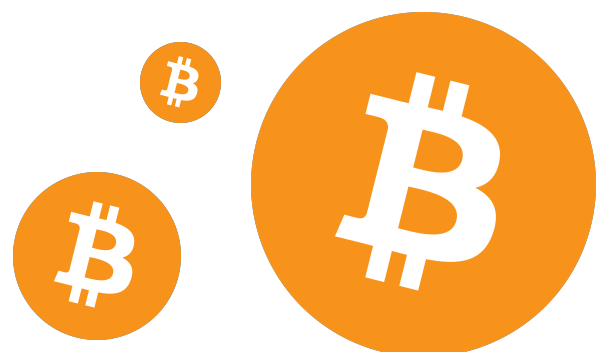

There can never be more than 21 million bitcoin. The last bitcoin is expected to be mined in 2140. This is the opposite of inflationary currencies like the euro and even scarcer than gold.

- **Bitcoin is ideal for long-term diversification.**

Like stocks, bitcoin can be volatile in the short term, but long term, it was the best-performing asset of the past decade. Buying and holding for years is a strategy that paid off for many people.

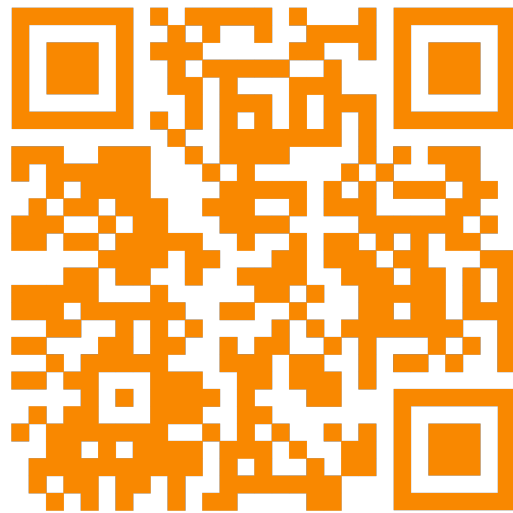

- **Bitcoin is just getting started.**

Bitcoin started as a groundbreaking computer science experiment, and now companies and governments are starting to buy it. Its network, users, and capabilities are constantly growing.

Step 1

Download Relai's bitcoin app

Step 2

Apply my invite code

Invite code

Step 3

Repeat step 2 regularly
and hold for the long term
